# Nicolas Schernetzki

Full-Stack Developer
Buenos Aires, Argentina • nicoschernetzki@gmail.com • LinkedIn • GitHub • Portfolio

## PROFESSIONAL SUMMARY

Developer who builds complete web applications, from the database and API to the interface and deployment. I started by automating business processes with VBA while working in sales, and that still defines how I work: I start from a real problem and build the solution that fits it, choosing the language and tools it needs. I've delivered projects in JavaScript/TypeScript, Python and C#, including a web scraper that runs in production. Advanced English (C1+).

## EDUCATION

**Fundación Pescar · Fundación Banco Nación** 2026
*Full-Stack Web Developer*
*Web Full-Stack Programming — 237 hrs*
- Development with MERN Stack (MongoDB, Express, React, Node.js); RESTful API construction and complete frontend/back-end integration.
- Delivered 4+ group and individual projects using Agile methodologies (Scrum and Kanban) with Git for version control.

*Interpersonal Skills Development — 154 hrs*
- Teamwork, effective communication and conflict resolution in collaborative, tech-focused environments.

**UTN.BA** 2023 – 2024
*University Expert in Programming — .NET Track*
- Built 2+ back-end projects in C# and .NET applying OOP principles.
- Advanced training in software architecture, design patterns, and REST API development with ASP.NET Core.
- Proficiency in Entity Framework, LINQ, and relational databases integrated in the .NET ecosystem.

**Ticmas · Argentina Programa** 2023
*Front-End Development Fundamentals*
- Training in HTML, CSS, JavaScript and React; development of responsive interfaces.

## PROJECTS

**Mood App** | Live version | Repository
- Group full-stack web app (team of 5) that recommends nearby events based on the user's mood, live on its own domain.
- Built a Python (FastAPI/asyncio) web scraper to populate live event data, extracting structured JSON-LD from external sources with rate-limit-aware retry/backoff (429/403 handling), idempotent MongoDB upserts, and a background job running every 6 hours.
- Also includes JWT + Google OAuth authentication, interactive map (OpenStreetMap), community events with an admin approval flow, reviews, email notifications and an AI help chat (Gemini).
- Took on most of the front-end (React, TypeScript, Tailwind CSS) and the back-end (REST API with FastAPI, Python and MongoDB).
- Helped with deployment using Docker Compose, Nginx and Cloudflare Tunnel as part of the production launch.
- Stack: React 19, TypeScript, Vite, Tailwind CSS, shadcn UI, FastAPI, MongoDB, Docker Compose, Nginx.

**EmotionShop — Full-Stack E-Commerce Platform** | Live version | Repository
- Built a full-stack e-commerce platform from scratch: REST API with Node.js, Express and MongoDB Atlas, React front-end, deployed on AWS (S3, CloudFront, EC2, ACM).
- Features JWT authentication, role-based access control (Admin/Customer), S3 image uploads, shopping cart, simulated checkout, ratings & reviews, and an admin dashboard with basic sales analytics.
- Set up CI/CD with GitHub Actions and containerized the app with Docker.
- Stack: React 18, Vite, Tailwind CSS, Redux Toolkit (RTK Query), Node.js, Express.js, MongoDB Atlas, Docker, GitHub Actions CI/CD.

## WORK EXPERIENCE

**Electrical Materials Companies** 2016 – 2026
*Sales Representative & Process Automation*
- Built custom Excel tools with VBA macros to automate price list generation and order management, solving real business problems — my first practical application of programming logic.
- Managed a portfolio of 100+ B2B clients and grew it 25% through sales follow-up analysis, prioritization and direct negotiation.
- Automated segmented email marketing campaigns to 500+ contacts and maintained complex product catalogs, reducing repetitive manual work.

## TECHNICAL SKILLS

**Programming Languages:** JavaScript, TypeScript, Python, C#, Java, PHP, C++, Visual Basic
**Backend & APIs:** Node.js, Express, FastAPI, ASP.NET Core, Laravel, REST APIs, HTTP, JWT / OAuth authentication, Entity Framework, LINQ, web scraping (Python/asyncio), OOP, design patterns
**Frontend:** React, Redux Toolkit (RTK Query), Tailwind CSS, Vite
**Databases:** MongoDB, MongoDB Atlas, MySQL, MariaDB, Oracle
**Cloud & DevOps:** Docker, Docker Compose, Nginx, GitHub Actions CI/CD, AWS (S3, CloudFront, EC2, ACM)
**Game Development:** Unity (C#)
**Tools & Methodologies:** Git, Postman, VS Code, Visual Studio, Microsoft Office, Agile, Scrum, Kanban
**AI Tools:** GitHub Copilot, Claude, Cline — AI-assisted development; local models via Ollama and LM Studio (Gemma, Qwen)
**Languages:** English (C1+), Spanish (Native)
